

Product Information

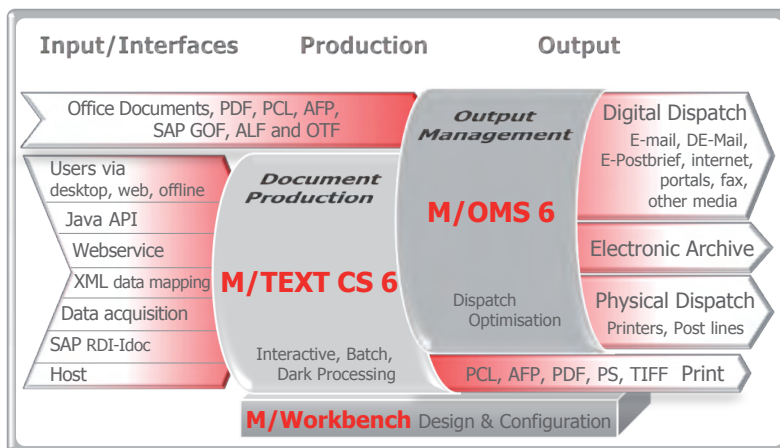

Text processing as a document service

M/TEXT CS 6 is the professional text processing system that, as far as possible, automatically produces the necessary documents of a company. In the interactive letter-writing area, the system offers the user a modern text editor, context-oriented document templates and further help that makes daily routine easier. The aim is to produce high quality documents via a company-wide standard document service: always in the corporate design and highly personalised, be they standard letters or individual documents.

M/TEXT CS 6 offers

- Batch processing and dark processing
- A text editor for interactive letter writing
- Automatic selection of document templates with optimal preparation for further processing
- Interfaces to external data sources and applications, also with independent data procurement
- High performance production of the required document volumes

Continuous document processes

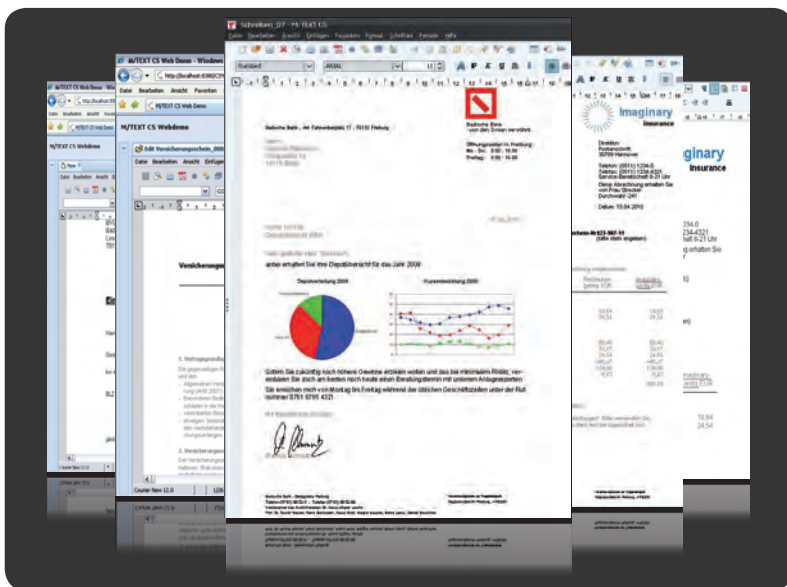

M/TEXT CS 6

With Release 6, a new generation of products is at the starting line.

M/TEXT CS 6 was redeveloped as a Java EE application using the most modern software technology and uses established market standards, such as common middleware products for scalability, system stability and 24 h operation, or eclipse for the design environment.

Interfaces that are appealing to you

Functions that support everyone

Your users

- work in the browser or use the desktop – or offline client
- Range of functions and ease of use is the same everywhere
- create all types of documents reliably and efficiently with a context-sensitive user guide and a text editor that adopts modern user standards and can be used intuitively
- can rely on user helps such as, the spell check, input check and hyphenation
- do not have to worry about corporate design or compliance requirements, thanks to intelligent document templates

Your document designers

- use the modern design environment for document templates, administrating resources and deployment.
 - ▶ *Product Information M/Workbench*

Your organisation

- uses all communication channels, such as mail, print, fax, archive or Web portals and uses output formats, such as AFP, PCL, Postscript, XML, PDF, PDF/A etc.
- is prepared for international correspondence through the support of numerous languages
- is well equipped for the future with the Java EE application: fail-safe and scalable through standard middleware and stateless 3-tier client-server architecture
- has surmounted performance bottlenecks because the system has been optimised for large numbers of users and any print volume ▶ *Product Information Performance*
- consolidates the application landscape: M/TEXT CS 6 can be integrated in other applications and can, itself, call up applications
- opens itself up to an enormous optimisation potential that is made even greater with the Output Management System M/OMS, e.g. through postage/dispatch optimisation, franking etc.

Your Benefits

More productivity, better customer relations

Job safety increases, communication with the customer is more personal. Reaction times are reduced: That is correspondence at the press of a button!

Higher efficiency, lower costs

through a standard solution with centralised resources for all documents.

More flexibility

through the fast implementation of new market demands, e.g. providing documents for service portals in the Web.
