Integrating kwsoft® M/TEXT in d.velop documents

Positioning M/TEXT as document creation engine for d.velop documents platform

- Creation and maintenance of document templates
- Generation of new documents, e.g. directly from customer file
- Filing of generated documents in the customer file
- Further editing and versioning of existing documents
- Electronic signature via d.velop sign and/or transfer to d.velop postbox
- Full multi-tenancy support
- Integration of kwsoft® AI capabilities – e.g. MCP servers, template migration and translation – with d.velop AI's Document Intelligence
- Future outlook: distribute documents directly from d.velop documents platform to portals and print servers

d.velop kwsoft

Self-service: from business requirements to a deployable template

PENTADOC semantics Kommunikationsmanagement GmbH

CURRENT STATE

Traditional template development is affected by:

- **Manual processing steps**
- **Coordination between IT and business teams**
- **QA cycles**
- **Bottlenecks in template development**
- **Disconnected tools and handoffs**

SOLUTION

Generative AI tailored to template creation, providing guided self-service for business users

1. Integration into existing M/TEXT environments
2. Automated creation in line with the customer framework
3. Integrated custom business logic and legal compliance
4. Business and language requirements captured through guided dialogue
5. Export of technically and functionally deployable templates
6. Avoid duplication and optimize the template portfolio

OUTCOME

Deployable template

- ✓ **Business users create templates independently**
- ✓ **Integration into the editorial workflow**
- ✓ **Functional specification becomes obsolete**
- ✓ **Reuse of existing components**
- ✓ **Lower maintenance effort over time**

Guided dialogue, automated and compliant with rules and frameworks
